

Sheet metal working machines  
for demanding professional use

## Updating machines HK series

Performance and control system of the long been known hydraulic bending machine series HK has improved!

**Thanks to the new hydraulic system machine became 30% faster!**

Also decreased noise of the hydraulic unit.

The new control system **VP5000PC 3D** allows the use of not only backstop plates, but also grippers of the sheet, which improves positioning accuracy and allow to fully automate the manufacturing process.

The control unit, based on an **industrial PC** and equipped with **15-inch touch screen**, greatly simplifies the process of the profiles designing and testing.

Thru the USB-port you can easily unload and download databases of profiles.

**Remote access for maintenance and upgrades!**
