

Sheet metal working machines
for demanding professional use

KST series machines updated

Performance, control and safety systems of the long length double acting folding machine has improved!

Thanks to the new hydraulic system machine became 35% faster!

Also decreased noise of the hydraulic unit.

Control system VP4000PC 3D upgrade provides the drawing of a new profiles by touch to touch. The control unit, based on an **industrial PC** and equipped with **19-inch touch screen**, greatly simplifies the process of the profiles designing, editing and testing.

Sectional backstops for tapered bending .

The improved safety system includes light curtains, laser sensor for upper beam and fences.

Remote access for maintenance and upgrades.
